Registration

Fully activate the Database software by inserting the Registration Code received from Support and clicking the **Unlock** button.

You may not yet have a Registration Code. The Registration Code is dependent on the Company Name and the number of user licenses you purchased. You have 60 days to work with the database and finalize the exact spelling / appearance of your company name before you email your request for a Registration Code to Support. The company name cannot be more than 40 characters long including spaces.

You need to include the contents of the Company Name field in your email request for a Registration Code.

Promptly after receiving your Registration Code request, Support will email a Registration Code to you. Copy and Paste the Registration Code into the database and click **Unlock** to fully activate it. The Company Name, User Count, and Registration Code must match exactly to that supplied in the email response from support.

Once you request your Registration Code and permanently activate the software, you can not return it for any reason (no refunds).
