

# Project Database Co

Developer of  
ExhibitOffice + ManagEvent

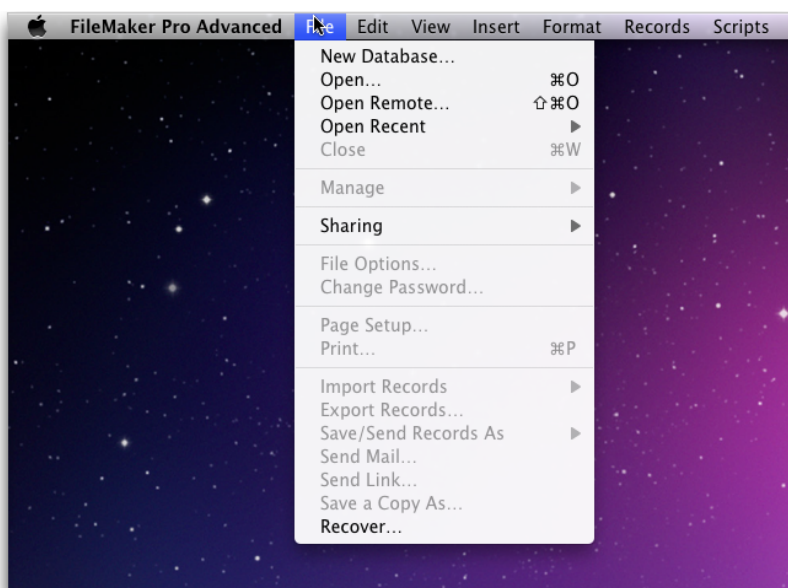

## Alternative Connection Method

If the start up Icon is not longer on your desktop here is an alternative method of starting the database.

Open Filemaker Pro the application, when this screen comes up click "Cancel"

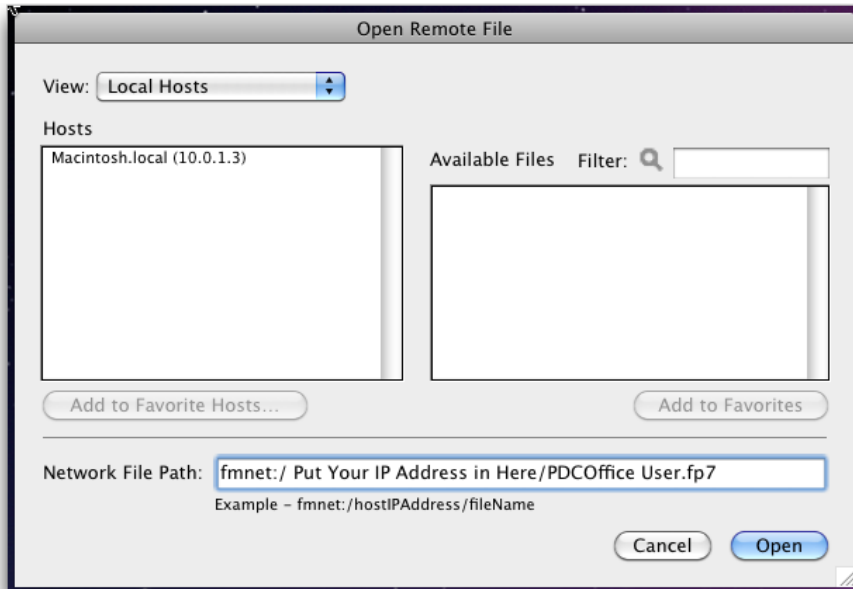

Then go to File and scroll down to "Open Remote"

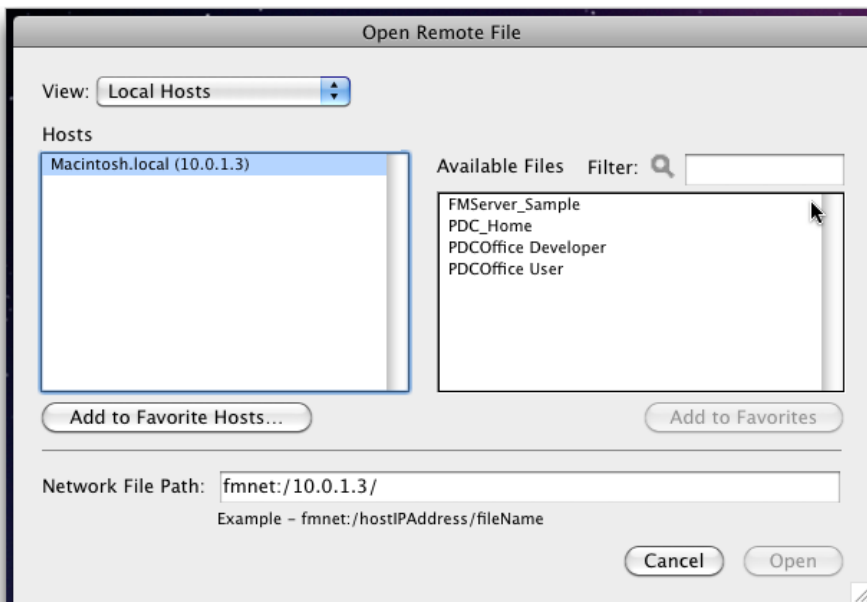

# Project Database Co

Developer of  
ExhibitOffice + ManagEvent

You will then see this screen (if your computer is on the network and the database is active on the network) Click on the Host Computer Name

A list of database files will come up Click on "PDCOffice User"

The database will open up and you can log in and start working.

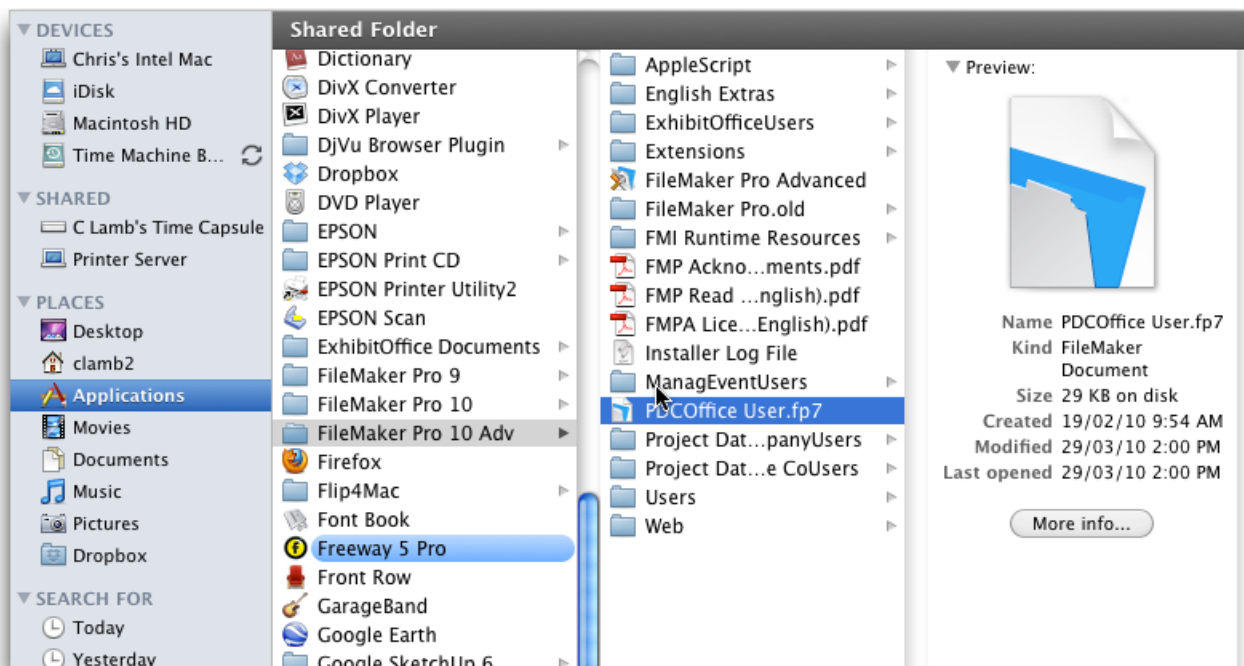

# Project Database Co

Developer of  
ExhibitOffice + ManagEvent

## Shortcut Replacement

To replace the start up file on your desktop navigate to the Filemaker Application in Programs.

There will be a file in there called PDCOffice User.fp7 (This is shown on a Mac but the same thing applies for a PC)

Create a shortcut for this file (right click it and select "create shortcut") then cut and paste it onto your desktop.

Your shortcut to starting the database will be working again.
